## kCFRunLoopEntry 即将 进入 RunLoop \_\_CFRunDoObservers(rl,rlm,kCFRunLoopEntry)

\_\_CFRunLoopRun(CFRunLoopRef rl, CFRunLoopModeRef rlm, CFTimeInterval seconds, Boolean stopAfterHandle, CFRunLoopModeRef previousMode) { //begin

1. Source0

2. Source1

4. dispatch

CFRunLoopSourceSignal 将 Source0 标记为

3. Timer Fired(timer Or mk\_timer触发定时)

5. \_\_CFRunLoopPerformBlock等 手动调用唤醒(CFRunLoopWakeUp)
